

Pneumatics Training Set

Category: Pneumatic, Hydraulic & Fluid Mechanics · Model reference: MZM-6004

SPECIFICATIONS

DESCRIPTION:

Pneumatic and electro-pneumatic training system series provides extensive pneumatics training with Real World Components. This integrated hand-on pneumatic and electro-pneumatic training system introduces students to the principles of pneumatic, electro-pneumatic and compressed air devices.

This unit allows for the connecting of pneumatic and electro-pneumatic circuits. The associated lab manual and instructor guide take the student step by step through each exercise to create a learning experience that provides a complete and practical introduction to pneumatic and electro-pneumatic technology. A complete power supply with compressor, together with a work surface and the components conveniently stored on a panel, provide everything included to understand this fluid power technology.

ELECTRO-PNEUMATICS TRAINING SET:

Training contents:

- Physical principle of electro-pneumatics training set
- Relay control circuit
- Electric self-holding circuit
- Feature of magnetic proximity switch
- Electric sequence control circuit
- Step diagram

Recommended option:

- Teach ware
